LynTec Releases Big Plans for InfoComm12 to Celebrate its 30th Year in Business

May 30, 2012 - Lenexa, KS – LynTec the leading provider of controllable circuit breaker panels releases a full line up of product debuts, demos and give-aways for InfoComm12 as it celebrates its 30th year in business.

The celebration will begin from Wednesday, June 13th in Las Vegas as InfoComm opens up its doors to thousands of AV industry professionals in this annual showcase of AV technology. The show runs from June 13 – 15th and expects to draw over 34,000 people from around the world and includes educational tracks, manufacturer training, demonstrations and exhibitors.

For the 2012 show, LynTec joins over 925 other exhibitors to provide attendees with innovative solutions and products. Featured in the LynTec booth again this year will be its Tower of Power panel display. In addition, the company plans to demo a number of other panel systems and introduce new products. Among these will be a demo of their master/slave multiple panel system. Mark Bishop, President of LynTec says that “this demo will enable clients to be able to watch two panels operate on a single controller as well as see how the GUI expands to set up, control and monitor multiple panels at once. This will save the customer a great deal of expense by operating multiple panels off of a single controller.”

The company also plans to demo an entirely new whole panel (whole system) current monitoring capability. Visitors will be able to view real time current monitoring system at the branch and main circuit breaker levels and learn firsthand how simple it is to configure the system and to view, store and download data.

Again this year, LynTec will be joined at their booth by SurgeX and will be able to demo the SurgeX power conditioning sidecars for the RPC panels.

New product introductions will include LynTec’s new EL (emergency lighting) circuit breakers and their brand new solution for high current circuit control. Bishop comments, “Historically LynTec has worked exclusively with Square D’s motorized circuit breakers which are available in up to 30 Amperage variations. However, lighting customers have asked for the ability to control up to 100A loads as part of their electrical power distribution system. LynTec now offers the ability to control up to 125 Amp loads as part of our remotely operated electrical system.”

Booth activity is expected to be running at full power with the introduction of these products, live demonstrations, and the company's Show Survival Kit giveaway.

The company encourages all attendees and fellow exhibitors to join them in their 30th year celebration at the InfoComm12 show. LynTec's booth number is C9536.

About LynTec

LynTec brings to market electrical protection and circuit switching capabilities in the same enclosures. In doing so, the company has always found ways to save space, lower system installation costs and build trusted relationships with audio system and lighting designers. Its expansion into electrical and lighting controls, and now its growth into expanded lighting control, energy monitoring, built in power conditioning, and mobile applications continues to position the company as a leading resource for the AV and lighting industries and an integral partner for sustainable energy practices.
